Subject: Zinc Phosphide Oat Bait,
EPA Reg. No. 61282-14

Ladies/Gentlemen:

This letter is being submitted in accordance with the requirements of FIFRA Section 6(a)(2), although we have some reservations whether the information actually qualifies for 6(a)(2) reporting.

We have recently received a report of the death of 2 horses due to the misuse of this product.

This misuse incident occurred when both horses inadvertently obtained access to the stored bait, tore open a 50 pound bag, and apparently consumed a great deal of bait. The label specifies in the Storage and Disposal Section that this product should be stored in an area not accessible to domestic animals.

If additional information becomes available, we will notify you.

Sincerely,

Judith A. Thompson
Registration Manager, Rodenticides
